PROFESSIONAL SUMMARY

Java Backend Developer focused on building scalable server-side systems with Java and Spring Boot. Experience designing REST APIs, service-to-service communication, database-backed applications, and distributed request flows.Hands-on with Spring Cloud Gateway, Eureka, Kafka, Redis, PostgreSQL, Docker, concurrency, and automated API testing.Strong focus on clean service boundaries, low-latency request handling, data consistency, and measurable backend performance.

TECHNICAL SKILLS

- **Languages:** Java 17/21/25, SQL, Object-Oriented Programming, Data Structures & Algorithms
- **Backend & Frameworks:** Spring Boot , Spring Framework, Spring Security , Spring Cloud Gateway, Netflix Eureka, REST APIs, Microservices, Spring AI
- **Database & Caching:** PostgreSQL, MySQL, Redis, Spring Data JPA, Hibernate, Database Indexing, Entity Relationships
- **Distributed Systems & Messaging:** Apache Kafka, Kafka KRaft, Service Discovery, API Gateway, Asynchronous Processing, Concurrent Request Handling
- **Developer Tools & AI :** LLM-Assisted Software Development, Spring AI, AI API Integration, Prompt Engineering for Code Optimization, Git/GitHub, Maven
- **DevOps & Testing:** Docker, Maven, Git/GitHub, Postman Automation Testing, JUnit 5, Mockito, Integration Testing

PROJECTS

ASHAMESH — REAL-TIME DISASTER RESPONSE NETWORK | Source-Code

Java | Spring Boot | Eureka | Apache Kafka | Redis | PostgreSQL | Docker

- Built a microservices-based disaster communication backend with Spring Cloud Gateway and Netflix Eureka for centralized routing and service discovery.
- Processed **100 simultaneous automated requests with 0% gateway drop**, validating concurrent request handling through an automated Postman load-testing runner.
- Implemented Apache Kafka with **KRaft standalone** for asynchronous event processing, separating message producers from downstream service consumers.
- Used Redis as an in-memory cache for frequently accessed data, reducing repeated database operations on high-read backend paths.
- Structured services with isolated responsibilities, DTO-based data transfer, encapsulated business logic, and PostgreSQL persistence for consistent service boundaries.

SCRYP — TECH SERVICES FREELANCING ENGINE | Source-Code

Java | Spring Boot | Spring Security | REST API | JWT | RBAC | MySQL | Hibernate

- Built a layered service-matching backend exposing **25+ REST endpoints** through typed DTOs for structured client-server communication.
- Reduced database response time by **40%** through MySQL indexing and optimized Hibernate entity associations.
- Implemented JWT-based authentication and RBAC to control protected API access according to user roles and token permissions.
- Added centralized runtime exception handling to keep low-level backend failures from reaching client-facing responses.
- Applied controller-service-repository separation with encapsulated business logic and persistent entity relationships.

EDUCATION

- **Master of Computer Applications (MCA)** | **7.80 CGPA** | 2026
  Veer Madho Singh Bhandari Uttarakhand Technical University (VMSBUTU), Dehradun
- **Bachelor of Science(B.Sc.) | 6.22 CGPA |** 2024
  Sri Dev Suman Uttarakhand University
